

Patented IV Dry-Site Sleeve

- Reduced Infections
- Cost Savings
- Improved Hygiene
- Ideal for Inpatient and Home Care

RencoMed's patented disposable IV-Sleeve provides water-proof protection for chronically implanted intravenous sites as well as for wounds, bandages, and casts. Patients can bath, shower, wash, and even swim with maximum freedom of movement and reduced risk of infection.

Available in both powder free natural rubber latex and synthetic nitrile, the IV-Sleeve reduces infections to patients and does away with the labor-intensive, makeshift solutions of the past.

Easy to apply and comfortable to wear, the IV-Sleeve's waterproof design is enhanced by a loose, billowy middle that prevents snagging, dragging, or other interference with IV catheters or wound dressings.

Institutional savings result from fewer infections, quick application, and fewer catheter re-insertions due to site contamination.
